

Nagnath Savant

Blockchain Researcher | Academic Author | Technology Professional

nagnathsavant@gmail.com · +91 9822548376 · Pune, Maharashtra, India · [LinkedIn: Nagnath Savant](#)

Professional Summary

Academic professional and blockchain researcher with **9 years of experience** in blockchain technology, cryptographic systems, and distributed computing — spanning university teaching, independent research, and technical writing from 2016 onward. Author of **Five books** across major publishers including Oxford University Press (forthcoming) and Apress (in progress), as well as self-published works reaching global audiences.

Research focus: post-quantum cryptography, blockchain security, quantum-blockchain convergence, and the engineering transition from classical to quantum cryptographic infrastructure. Combines an engineering academic foundation with a sustained independent research and publishing program that bridges rigorous technical analysis and practitioner-accessible exposition.

Experience

Blockchain Researcher / Technical Author — Freelance

June 2017 – Present · Pune, Maharashtra, India

- Conducting independent research in blockchain architecture, post-quantum cryptography, and quantum-blockchain convergence
- Authored three book-length manuscripts under contract or proposal with Oxford University Press, Cambridge University Press (proposed), and Apress; completed two additional independent books
- Patent-pending innovation in quantum defect mapping and blockchain-based identity for solar panel systems (2026)
- Selected for Blockchain India Challenge 2026 (Ideation Phase) — a competitive national technology innovation initiative
- Engaged in ongoing research on cryptographic migration pathways from classical to post-quantum algorithms

Assistant Professor, Electronics and Telecommunication Engineering

KPC Pandharpur · June 2017 – June 2023 · Pandharpur, Maharashtra, India

- Designed and delivered undergraduate coursework in Electronics Engineering, Telecommunication Engineering, Embedded Systems, and Digital Signal Processing
 - Mentored 100+ undergraduate students through final-year projects across hardware and software domains
 - Integrated blockchain and cryptography topics into engineering pedagogy; developed course materials for emerging technology modules
 - Contributed to department research activity; co-authored peer-reviewed publications during tenure
-

Books and Major Publications

Academic and Professional Books

“Blockchain Unlocked: Fundamentals to Real World” *Publisher: Oxford University Press · Forthcoming* Comprehensive guide from blockchain fundamentals through real-world enterprise and industry applications; covers cryptographic primitives, consensus mechanisms, smart contracts, and deployment patterns across financial, supply chain, and public sector use cases.

“Blockchain Foundations: Mastering Cryptographic Primitives, Consensus Mechanisms, and the Mathematics Behind Distributed Ledger Technology” *Publisher: Apress · In Progress* Technical deep-dive into the mathematical and cryptographic foundations of blockchain technology; targets advanced practitioners and academic readers.

“The Post-Quantum Cryptocurrency Revolution: Preparing Digital Assets for the Quantum Era” *Self-Published · 2025 · 87,606 words* Examines the threat that quantum computing — specifically Shor’s algorithm — poses to existing cryptocurrency cryptographic schemes; surveys NIST post-quantum standards; provides a roadmap for quantum-resistant digital asset infrastructure.

Trade and Accessible Books

“The A–Z Guide to Cryptocurrency for Your Retirement” *Amazon KDP · Apple Books · Google Play* Accessible guide to cryptocurrency fundamentals and investment considerations for a general audience; available across major digital retail platforms.

“Conversations with the Future: Understanding ChatGPT in a Changing World” *Amazon KDP* Exploration of large language model technology, its societal implications, and practical applications for general readers.

Research and Innovation

Patent Pending: “Quantum Defect Mapping and Blockchain-based Identity for Solar Panels” (2026) Proposes a system combining quantum sensing techniques for solar panel defect characterization with blockchain-based immutable identity and provenance tracking; applicable to renewable energy infrastructure integrity and asset management.

Blockchain India Challenge 2026 — Ideation Phase (Selected) National blockchain innovation competition; selected at the Ideation Phase for a proposal applying blockchain technology to a strategic infrastructure challenge.

Peer-Reviewed Journal Publications

- Savant, N., et al. “Energy Saving System Based on Microcontroller” — *IJSART*, Vol. 2, Issue 5, 2016
 - Savant, N., et al. “Microcontroller-Based Smart Energy Monitoring System” — *IJSART*, Vol. 2, 2016
 - Savant, N., et al. [Embedded systems / IoT application] — *IRJET*, 2016
 - Savant, N., et al. [Microcontroller-based automation] — *International Research Journal of Multidisciplinary Studies*, 2016
-

Technical Skills

Core Competencies

- Blockchain Architecture and Distributed Ledger Technology
- Cryptographic Protocols (symmetric, asymmetric, hash functions, ZKP)
- Post-Quantum Cryptography (lattice-based, code-based, hash-based schemes; NIST PQC standards)
- Smart Contract Development and Audit
- Consensus Mechanisms (PoW, PoS, PBFT, and variants)
- Quantum-Resistant Algorithm Design and Migration Planning

Platforms and Frameworks

- Blockchain: Bitcoin protocol, Ethereum, Solidity, Web3
- Quantum Computing: Qiskit (IBM), conceptual familiarity with Cirq, PennyLane
- Embedded Systems: Arduino, PIC, 8051 microcontrollers, IoT systems
- Development: C/C++, Git/GitHub
- Documentation: LaTeX, Markdown, technical writing for academic and professional publication

Research and Academic Skills

- Academic Writing and Peer-Reviewed Publication

- Research Methodology and Literature Review
- Curriculum Design and Pedagogical Development
- Technical Communication for Diverse Audiences

Domain Knowledge

- Distributed Computing and Network Security
 - Quantum Computing Foundations (algorithms, hardware, error correction, QKD)
 - Blockchain and Energy Systems
 - Technology Policy and Regulatory Frameworks (NIST PQC, EU AI Act context, NQI)
-

Education

Bachelor of Engineering — Electronics and Telecommunication Engineering Solapur University · 2016 *Coursework emphasis: signal processing, electronics systems, telecommunications, embedded systems*

Research Interests

- Post-Quantum Cryptography and NIST PQC standards implementation
 - Blockchain Security and cryptographic attack surface analysis
 - Quantum-Blockchain Convergence: interoperability, trust models, and hybrid architectures
 - Blockchain and Renewable Energy: traceability, asset identity, and grid management
 - Technology Education: pedagogical approaches for blockchain and quantum computing at university level
-
